DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claim 22-24 rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (6,063,647) in view of Hashimoto (6,475,896).

Regarding Claim 22, Fig. 1A of Chen et al. show a circuit element 20p with a conductive pad 24, an adhesive layer 36 on the pad, a bump 30 located in an opening formed in the adhesive layer, bump 30 connected at its bottom face to the pad with a height greater than the thickness of the adhesive layer. Fig. 3B shows part of adhesive layer removed at the top portion of the bump 30 to expose bump 30 from the surface of the adhesive. Furthermore Chen et al. teach that the circuit element/network 20 can be flexible (see Column 4, lines 13-26 and 44-53), pad 24 can be made from metals such as copper (see Column 4, lines 53-63), bump 30 can be made of metal (see Column 5, lines 22-27) and adhesive layer may be made of inorganic fillers (see Column 5, lines 53-64).

Regarding Claim 23, in Fig. 1A of Chen et al. pad 24 is patterned in a predetermined form.

Regarding Claim 24, Fig. 5E and 5F of Chen et al. show pad 125 of electronic device 121 connected with the end of bump 130.

Art Unit: 2826

Chen et al. do not disclose the bump with front face completely removed of resin material. However, Hashimoto discloses an electronic component and semiconductor device, method of making the same and method of mounting the same, circuit board, and electronic instrument where the bump with front face completely removed of resin material. It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include required bump configuration in Chen et al. as taught by Hashimoto in order to have better conductivity and better reliability.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
